Socket testers

PAN Socket-Test-2

Socket tester with LCD voltage display and 30 mA RCD test for quick testing of socket wiring

- Socket testing
- Green and red LEDs indicate correct socket wiring
- **No battery required for operation**
- The instrument does not detect whether neutral conductors and protective earth conductors are reversed!
- **Illuminated digital display 8 mm**
- **30 mA RCD test for residual current devices**

Application Benefits at a Glance:

- Socket wiring and the 30 mA FI/RCD protection function can be checked in a single step.
- The printed fault table makes the LED indications understandable even without in-depth knowledge of measurement technology.
- In Schuko sockets, the device can be reversed to adapt the FI/RCD test to the socket's phase orientation.

Technical Data	PAN Socket-Test-2
AC voltage AC (V ~)	90 - 250 V
Test current DC (A =)	30 mA
Instrument dimensions	65 x 62 x 66 mm
Weight (gross / net)	95 / 62 g
Required battery(ies):	---
Measurement category (CAT)	CAT II 300 V
